

Model 250 Instructions

1. Place tip of 10 oz. tube into spout cutter. (make sure tip is not cut too small, this will cause material to blow out the back of the tube). Squeeze the trigger to cut the tip.
2. Swivel the seal puncture tool away from the frame, stick in center of freshly opened tip, push down to pierce the protective foil. Wipe off and realign along the rail.
3. Grip the back rubberized handle, (only the handle, squeezing the trigger will lock the rod in place).
4. Press and hold Starburst thumb release, pull back rod gripping by the ladder hook. Release Starburst thumb release.
5. Place opened 10 oz. tube into cradle. Squeeze the trigger to advance the rod.
6. Keep the long side of your angled cut on the outside of the bead, use the revolving barrel when going around corners to maintain a constant flow.
7. When finished repeat steps 3 & 4, remove the cartridge.
